EXPERIENCE

Product Data Analyst — Analytics Engineering

Oct 2025 – Present

PhonePe — People Tech

- Own and operate the enterprise HR data lake — schema design, performance optimization, automated monitoring, incident response, and vendor coordination across SAP HANA Cloud and MySQL. Achieved 4x improvement in data refresh performance.
- Build and maintain data backends for 5 production applications serving 500+ daily users — HeadcountPro, Team Pulse, Performance Central, onboarding automation, and attendance systems.
- Architect the HeadcountPro / AOP platform end-to-end — multi-source data integration, cost allocation logic with multi-level fallback, budget snapshot write-backs, and planner/approver modules.
- Design computation logic and product specifications — translate business requirements into data models, perform application testing, validate accuracy across systems, and coordinate with vendors.
- Engineer production ETL pipelines in Python — multi-source extraction, staging transformations, and loading into application databases with automated error recovery, alerting, and monitoring.
- Build and operate 12+ n8n workflow automations — employee packets, scheduled syncs, mail triggers, WhatsApp integration for hiring, health monitoring, report distribution, and event-driven refreshes.
- Built product features from 0 → 1 — designed and shipped the Onboarding Workflow Module and 1:1 Conversations module from scratch, used across the organization.
- Ensure data quality and governance — source-to-target reconciliation, automated validation, freshness monitoring, and execution logging across all pipelines.
- Automate reporting pipelines — Python scripts connecting databases and APIs to generate and distribute executive decks and operational summaries on schedule.
- Manage production infrastructure — application servers, staging/prod deployments, user access, root-cause debugging, and single point of contact for all data incidents.

Data Analyst (FTC)

Jul 2024 – Sep 2025

PhonePe — People Tech

- Built Power BI dashboards and managed dataflows for Talent Acquisition, HRBPs, and leadership — recruitment funnels, workforce metrics, headcount tracking, and automated reporting.
- Authored complex analytical SQL on SAP HANA — workforce demand analysis, attrition patterns, hiring velocity, and headcount forecasting for Finance and HR leadership.
- Started building the Python automation layer — connecting HANA, MySQL, and internal APIs to auto-generate reports, replacing manual data workflows across teams.
- Took ownership of HR product data operations — vendor coordination, VM management, data quality assurance, and designing logical workflows for application backends.
- Assumed data ownership of custom HR applications — single point of contact for data integrity, schema decisions, and backend operations across people-tech products.

People Analytics Intern

Oct 2023 – Jul 2024

PhonePe — HR Analytics

- Built the Talent Acquisition Process Dashboard in Power BI — pipeline visualization, KPI tracking, and automated stakeholder reporting.
- Created calculation views in BAS Studio on SAP HANA — the semantic data layer powering all downstream BI reporting still in use today.
- Collaborated across teams to translate business requirements into structured data analysis and visual storytelling for HR leadership.

Data Analyst Intern

Mar 2023 – Apr 2023

Smollan — Google Pixel, US Strategy & Analytics

CORE STACK

Python	●●●●●
SQL	●●●●●
SAP HANA	●●●●●
n8n	●●●●●
Power BI	●●●●●
Airflow	●●●●●

EXPERTISE

ETL Pipelines

Data Modeling

MySQL

PostgreSQL

REST APIs

Data Quality

DAX

Dataflows

BAS Studio

Webhooks

Linux/VM

Git

SuccessFactors

Google APIs

Cron

EDUCATION

MBA — Business Analytics

Presidency University
2021 – 2023

★ GOLD MEDALIST

B.Sc — Computer Science

Chaitanya Degree College
2018 – 2021

CERTIFICATIONS

Google Data Analytics Professional
IBM Data Analysis with Python
SQL Masterclass for Analytics

- ▶ Analyzed e-commerce datasets for Google Pixel US channel strategy — sales pattern analysis and strategic recommendations for channel optimization.

ENGINEERING SCOPE (HR PRODUCTS)

HeadcountPro / AOP

Data layer, ETL pipelines, cost allocation engine, budget write-backs, planner/approver computation logic.

[Python](#) · [MySQL](#) · [HANA](#) · [n8n](#) · [Airflow](#)

Team Pulse

Built onboarding + 1:1 module from scratch. Daily data feeds, mail triggers, exception handling.

[Python](#) · [MySQL](#) · [n8n](#) · [Webhooks](#)

Performance Central

Daily sync pipelines, source-target validation, AI Summary module, scheduler operations.

[SQL](#) · [Python](#) · [Power BI](#) · [Cron](#)

n8n Automation Platform

12+ workflows built from scratch: employee packets, WhatsApp hiring, health monitors.

[n8n](#) · [REST APIs](#) · [Webhooks](#) · [Python](#)

SAP HANA Data Lake

Enterprise people data (sole owner). Schema, BAS views, query optimization, monitoring.

[SAP HANA Cloud](#) · [BAS Studio](#) · [SQL](#)

Board Evaluation Tool

Data layer, tracker metric generation, automated insight sheets via n8n workflows.

[n8n](#) · [Google Sheets](#) · [Python](#) · [MySQL](#)

Power BI Analytics Layer

HR dashboards, dataflow management, KPI reporting, automated executive decks.

[Power BI](#) · [DAX](#) · [Dataflows](#) · [HANA](#)
